

Storage & Backup Engineer (H/F)

Our client is a leading IT company in Belgium, recognized for its expertise in information technology services covering infrastructure & cloud, software development, as well as consultancy and managed services. The company supports organizations of all sizes in protecting and managing their data.

You will join the Data Protection team, responsible for ensuring data security, availability, and resilience within complex and innovative IT environments.

RESPONSABILITÉS

As a Backup & Storage Engineer, you play a key role in maintaining, evolving, and optimizing the Data Protection portfolio.

Your main responsibilities are:

- Maintain, upgrade and manage our customer's Data Protection portfolio
- Be responsible for operating procedures, data migration, and development operations (on-prem/off-prem)
- Take part in presales activities (respond to requests, present our customer's Data Protection services portfolio)
- Assess and advice on possible technical solutions
- Provide solutions that are cloud-provider agnostic to meet customers' needs and preferences
- Identify and communicate with major stakeholders and other third parties and partners
- Possibility to contribute to the design and evolution of backup architecture in close collaboration with the operational team responsible for backup, recovery, and data lifecycle management processes

PROFIL

- Master's degree in computer science or a relevant field
- Minimum 5 years of experience in a similar role
- Experience with Data protection Tools (DELL PPDM, NetBackup, Veeam, IBM Spectrum Protect...) and their Cloud possibilities
- ITIL knowledge and use
- Knowledge of programming languages like Java, PHP, Python, PowerShell, use of RESTapi
- Knowledge of most operating systems (Windows, Linux, AIX, ...)

- Knowledge of IT infrastructure (network, storage, virtualization, containerization, security, HA-PowerHA, Clusters, DBs, ...)
- Understand particularities of a mutualized infrastructure
- Experience with container technologies (Docker, Kubernetes/Red Hat OpenShift) is a plus
- Positive attitude and a strong commitment to delivering quality work
- Creativity, collaboration and team spirit
- Ability to jump between projects
- Effective communication skills to work with customers, partners, business vendors, CxO, Business Units and Team leaders
- Able to build and follow operational procedures

OFFER

Our client offers:

- A collaborative working environment with professional and enthusiastic colleagues
- State-of-the-art tools and infrastructures
- Personalized career support and development
- Numerous training opportunities and certifications
- A friendly, dynamic, and innovation-driven company culture
- Regular team events and social activities
- A complete salary package
- Teleworking policy (up to 3 days/week)
